NEAT + **Novelty Search** for PCG generates comparable video game levels **faster** with **less domain knowledge** and **no data requirements.**

PCGNN: Using NEAT and Novelty Search for Diverse and fast level generation

Michael Beukman, Steven James, Christopher Cleghorn

Introduction

Video games are popular, but content is **slow** and **expensive** to develop manually. Procedural Content Generation (PCG) can help with this.

Problems – Current Methods

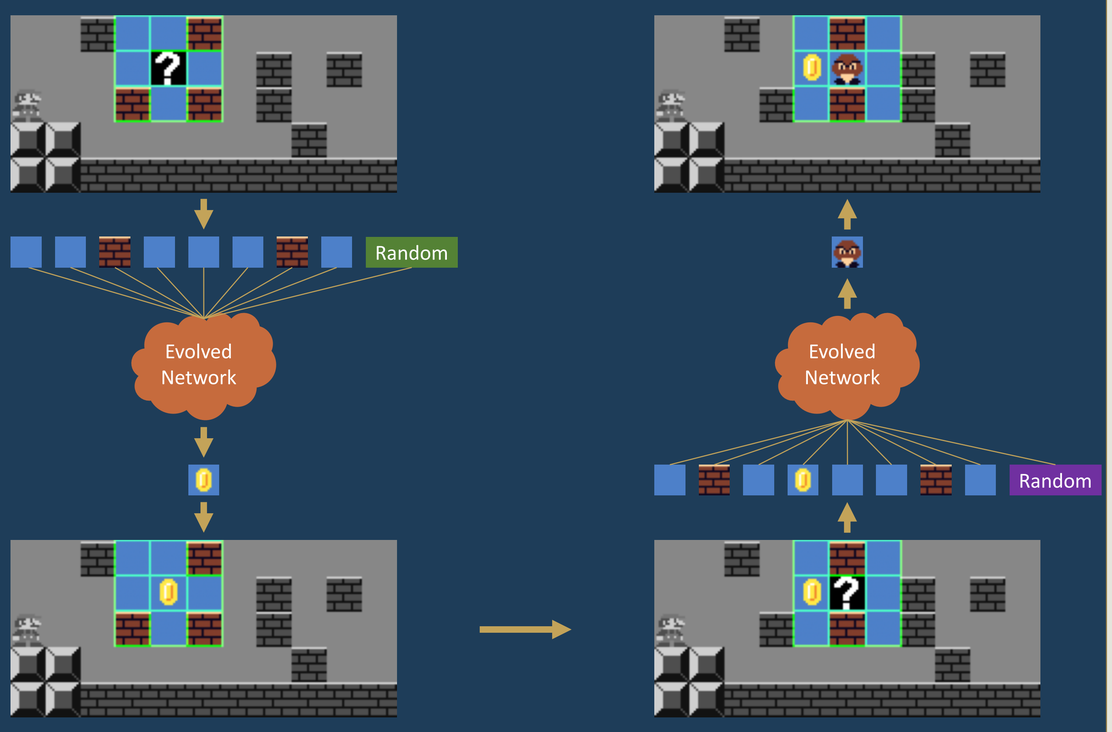
- Slow [1, 2]
- Need Data [3]
- Domain Specific Reward Engineering [4]

Method - Solutions

Learn a **Neural Network**	⟶	**Fast generation**
Evolve it using a **Genetic Algorithm** (NEAT)	⟶	**No data requirements**
Fitness functions – **solvability** & **novelty**	⟶	**Domain independent**
Novelty: Reward **Diversity**	⟶	**Exploration + diverse levels**

Generation

Generate levels for 2D tilemaps using a Neural Network



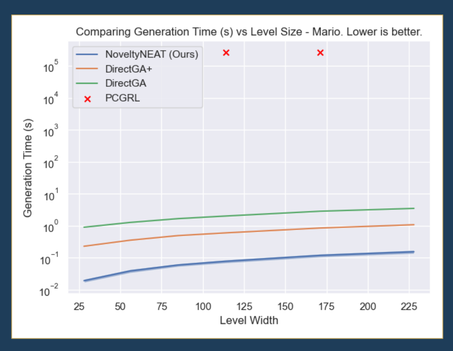
Performed sequentially for all tiles **using previous predictions as input + random perturbations**

Results

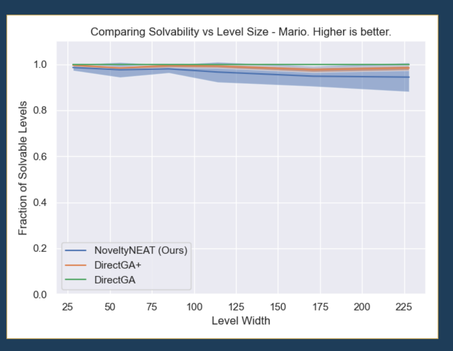
Fast, Comparable, Generalisable

Generates arbitrary sized levels with no retraining

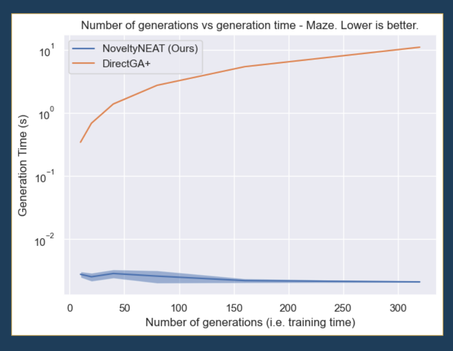
Fast



Mostly Solvable



More training: same generation time



Comparable to Baselines
